PHYSICAL PROTECTIVE MEASURES

Implement and maintain risk-informed countermeasures and policies protecting people, borders, structures, materials, products, and systems associated with key operational activities and critical infrastructure sectors.

MISSION AREA

Protection

FUNCTIONAL AREAS

• Biosecurity
• Border protection
• Identifying and prioritizing assets to protect
• Physical Security Measures
• Site-specific and process-specific risk assessments

EXAMPLE WORDING

Buckeye County performs risk assessments of critical infrastructure, including city and county government facilities, to identify and prioritize the physical security measures designed to deny unauthorized access to facilities, equipment, and resources.

Utilities and other critical lifeline sites install fencing, hardscaping, and locks to entrances/exits and internal areas critical to the business operations of facilities (e.g. computer server rooms, HVAC, chemical storage, or file rooms).

Examples demonstrate options to consider and are provided for training purposes only. The examples are intended to demonstrate how planning teams may incorporate the key tasks found on FEMA’s Core Capability Development Sheets into planning documents (e.g. the Emergency Operations Plan, Mitigation Plan, Debris Management Plan, HazMat Plan, and so forth). The items in the Functional Areas section are FEMA-identified areas where gaps could exist for the associated core capability. Counties should not re-design their Emergency Operations Plans around the Core Capabilities; stakeholders should integrate the capabilities within the EOP and in a format that is effective for the jurisdiction.
